

AMOC APPROVAL FROM THE FAA

In February 2009, TASS Inc. received AMOC approval from the FAA to the Boeing 757 scribe line AD (2007-19-07) for altered inspection methods and compliance times on 757-200 passenger aircraft modified to freighters by Precision Conversions LLC. The TASS Inc. AMOC provided alternate inspection methods (since the STC modification prevented the standard Boeing Service Bulletin NDI from being performed) along with increased inspection thresholds and repeat intervals over the Boeing Service Bulletin. This solution not only provided Precision Conversions' operators with a method for complying with the AD, but also with a less restrictive inspection schedule.
