

# AIR NEW ZEALAND 747-400 INTERIOR UPGRADE STC

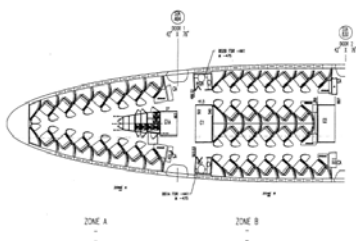

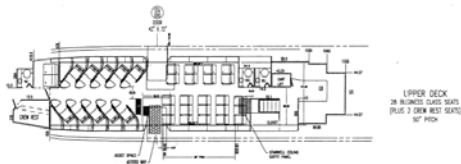

## Project Description

This project involved a major interior and IFE upgrade and composite test program of Air New Zealand's fleet of 747-400 Aircraft.

## TASS support

TASS managed the STC project through the Seattle ACO and approved all the engineering, test and conformity requirements with our DER/DAR team. Included were a full scale composite allowables test program, interface loads and substantiation of custom monuments and substantiation of the aircraft structure and systems.

The program also launched TASS' Parts Manufacture Approval (PMA) System, which was develop and utilized to produce all the Air New Zealand manufactured custom parts and monuments.
